

CLASS #102 – DSLC & MSLC Controls

Description

This class will give the student the opportunity to learn more about servicing and commissioning power management systems using the DSLCII & MSLCII controls. During this course, the student will learn about the theory, installation, programming, operation, and maintenance of the DSLCII & MSLCII control system with the help of simulators and various modules. The hands-on part of the course will include programming, adjustments, and troubleshooting techniques on the control system.

Class Objectives

Upon successful completion of this course the student will be able to:

- Demonstrate a strong understanding of power generation control theory pertaining to the DSLCII & MSLCII control system.
- Calibrate and adjust the control using the Woodward® Toolkit software.
- Configure mA inputs and outputs for protection and control purposes.
- Understand control modes such as frequency and voltage control or load and power factor control, and when each mode is in effect.
- Demonstrate and understand methods and types of synchronization available within the control.
- Understand and implement the control in any application such as AMF, peak or base load, Isolated, Utility parallel, and Co-Generation modes.

Course Duration

The course runs for two days and is conducted at our premises in Kingsgrove, NSW. We can offer this course as part of an on-site training program (details available on request). Class size is limited to a maximum of eight students.

Attainment

A “Certificate of Attainment” is awarded to students who successfully pass a written examination.

The instructor reserves the right to modify the class content to best suit the needs of the class.
